

Application security and compliance when migrating Cloud Environments

Organizations are continuously under economic pressure to deploy their custom or legacy applications into public, private or hybrid clouds. Security and compliance are essential factors when migrating applications. Avocado Security platform delivers real-time application self-protection with integrated security, pico-segmentation and compliances such as PCI, PII, HIPAA etc.

Avocado Security Platform eliminates needs for expensive add-on services, streamlining processes, while simplifying complexities for IT security team. Avocado Security Platform locks in security while scaling with your business. Imagine that. Spoof-Proof, Always-On Application Security and PCI-DSS compliance, no more expensive add-on services, reduced IT headaches, while lowering annual costs.

Pico-segments are elastic and extend to all environments where your applications are running. Moreover, it provides the security control as single pane of glass for all your applications running in different environments.
